

INSTRUCTION OF THE TESTER

POWER INPUT

Plug in a 5V power supply

The other socket plugs into the data cable under test

TEST PERFORMANCE

Both VCC and GND are lit:

Charging is functional.

Both D+ and D- are on:

The data communication is normal, and the QC fast charging function is normal.

CC Bright:

PD fast charging and OTG function normal (CC only exists TypeC-TypeC data cable)

If a light does not light up, it means that the corresponding function of the data line is missing
