

PRECISION SINGLE OPERATIONAL AMPLIFIERS

Outstanding characteristics of LM108A :

- INPUT OFFSET VOLTAGE : 0.5mV MAXIMUM
- INPUT BIAS CURRENT : 3nA MAXIMUM OVER FULL TEMPERATURE RANGE
- INPUT OFFSET CURRENT : 0.4nA MAXIMUM OVER FULL TEMPERATURE RANGE
- POWER SUPPLY CURRENT : 600 μ A MAXIMUM
- GUARANTEED DRIFT CHARACTERISTICS
- SLEW RATE OF 10V/ μ s AS INVERTING AMPLIFIER

DESCRIPTION

The LM308A is a precision operational amplifier having specifications a factor ten better than FET amplifiers over a -55°C to $+125^{\circ}\text{C}$ temperature range. Selected units are available with offset voltages less than 1mV and drifts less than 5mV/ $^{\circ}\text{C}$. This makes it possible to eliminate offset adjustments, in most cases.

The device operates with supply voltages from $\pm 2\text{V}$ to $\pm 22\text{V}$ and has sufficient supply rejection to use unregulated supplies. Although the circuit is interchangeable with and uses the same compensation as the LM101A, an alternate compensation scheme can be used to make it particularly insensitive to power supply noise and to make supply bypass capacitors unnecessary.

ORDER CODES

Part Number	Temperature Range	Package			
		H	N	J	D
LM108/A	$-55, +125^{\circ}\text{C}$	•	•	•	•
LM208/A	$-40, +105^{\circ}\text{C}$	•	•	•	•
LM308/A	$0, +70^{\circ}\text{C}$	•	•	•	•

Examples : LM108H, LM108AH, LM308N

SCHEMATIC DIAGRAM

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	LM108,A	LM208,A	LM308,A	Unit
V _{CC}	Supply Voltage	±22	±22	±22	V
V _i	Input Voltage - (note 2)	±15	±15	±15	V
I _{id}	Differential Input Current - (note 1)	±10	±10	±10	μA
P _{tot}	Power Dissipation	500			mW
	Output Short-circuit Duration	Infinite			
T _{oper}	Operating Free-air Temperature Range	-55 to +125	-40 to +105	0 to +70	°C
T _{stg}	Storage Temperature Range	-65 to +150	-65 to +150	-65 to +150	°C

Notes : 1. The inputs are shunted with back-to-back diodes for overvoltage protection. Therefore, excessive current will flow if a differential input voltage in excess of 1V is applied between the inputs unless some limiting resistance is used.
 2. For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

ELECTRICAL CHARACTERISTICS

 $\pm 5V \leq V_{CC} \leq \pm 20V$, $C_1 = 30pF$, $T_{amb} = 25^\circ C$ (unless otherwise specified)

INPUT GUARDING

Leakage currents are on the verge of causing trouble at +125°C. The standard pin configuration of most IC op amps has the input pins adjacent to pins which are the supply potentials. Therefore, it is advisable to employ guarding to reduce the voltage difference between the inputs and adjacent metal

runs. A ten-lead pin circle is used, and the leads of the IC are formed so that the holes adjacent to the inputs are vacant when it is inserted in the board. The guard, which is a conductive ring surrounding the inputs, is connected to a low impedance point that is at the same potential as the inputs.
